SUMMARY

Results-driven Frontend Developer with 1+ years of professional experience at Techno Masr, specializing in building dynamic, responsive, and performance-optimized web applications using React.js and Next.js. Proficient in TypeScript, Tailwind CSS, and Redux Toolkit. Experienced in implementing complex UI features, including 3D web elements and comprehensive Right-to-Left (RTL) localization for Arabic platforms. Dedicated to writing clean, scalable code aligned with UX/UI best practices.

EXPERIENCE

Frontend Developer | Techno Masr (Full-time)

June 2025 – Present

- Developed and maintained high-performance web applications using React.js, Next.js, and modern styling frameworks (Tailwind CSS, Bootstrap).
- Specialized in building seamless Right-to-Left (RTL) layouts and localization for major Arabic-language platforms, ensuring flawless user experiences.
- Collaborated with UI/UX designers and backend teams to integrate RESTful APIs and optimize front-end performance.
- Built interactive feature sets, including 3D model viewers (Three.js / React Three Fiber) and highly interactive user dashboards.

Freelance Frontend Developer (Self-employed)

Dec 2024 – May 2025 (6 months)

- Implemented responsive designs and reusable components using React.js, improving mobile user experience.
- Optimized API calls and rendering, which decreased API response times by 25%.

EDUCATION

Mansoura University

Bachelor's degree in Computer Science

Graduation Year: 2022 – 2023

SKILLS

Frontend Development: HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js

Styling & Frameworks: Tailwind CSS, Bootstrap, Sass, CSS Modules, Glassmorphic Design

State Management: Redux Toolkit, Context API, Axios, RESTful APIs Integration

Tools & Version Control: Three.js / React Three Fiber (3D Web Integration), Git, GitHub, Vite, npm

Core Concepts: RTL Layout Support, Performance Optimization, Cross-Browser Compatibility, Clean Code

PROJECTS

Al Foursan – Real-Time GPS Fleet Tracking System | React.js, WebSockets (Socket.io), Google Maps API, Redux Toolkit

- Engineered a production-grade, real-time fleet tracking application integrated with Google Maps API to monitor vehicle assets dynamically.
- Implemented WebSocket connections to consume live GPS data streams, ensuring sub-second updates of vehicle locations and speed metrics without page reloads.
- Developed a Geofencing feature allowing clients to draw custom map Polygons and track whether vehicles adhere to their designated routes and boundaries.
- Built a historical route playback feature that visualizes previous vehicle paths and trip histories smoothly on the map interface.
- Integrated a real-time Notification System fueled by custom WebSocket events to alert dispatchers instantly of route deviations or speeding violations.
- **Demo:** [Live Demo](#)

Form – Premium E-commerce Coffee Platform | React.js, Context API, GSAP, Three.js, Tailwind CSS, l18next

- Developed a comprehensive, dual-language (Arabic/English) e-commerce platform with full Right-to-Left (RTL) layout support and seamless dynamic translation.
- Integrated an interactive 3D product viewer using Three.js/React Three Fiber, allowing users to interact with and rotate products in real-time, significantly boosting user engagement.
- Built complex, high-performance UI animations and smooth transitions utilizing GSAP (GreenSock Animation Platform) to deliver a premium, glassmorphic user experience.
- Implemented secure user authentication (Auth) and a robust booking system for personal event catering services.
- Optimized perceived performance and user experience by implementing custom Skeleton Loaders during asynchronous data fetching and API calls.
- Engineered a secure checkout workflow with simulated payment gateway integration, cart persistence, and order history tracking.
- **Demo:** [Live Demo](#)

Industrial Agora – B2B Industrial Machinery Marketplace | React.js, Redux Toolkit, Tailwind CSS, RESTful APIs

- Developed a robust B2B e-commerce marketplace dedicated to buying and selling heavy industrial machinery and spare parts.
- Implemented an Offline Chat feature enabling buyers to leave asynchronous messages for sellers, ensuring persistent communication data sync.
- Architected a secure user authentication system with Role-Based Access Control (RBAC) to manage subscriptions, user permissions, and seller privileges.
- Designed a highly responsive UI with comprehensive filtering, allowing users to search and sort complex machinery data efficiently.
